About COST

COST is the longest-running European framework supporting international cooperation among researchers, engineers and scholars across Europe. It is a unique means to jointly develop own ideas and new initiatives across all fields in science and technology, including social science and humanities, through pan-European networking of nationally funded research activities. Based on a European intergovernmental framework for cooperation in science and technology, COST has been contributing since its creation in 1971, to closing the gap between science, policy makers and society throughout Europe and beyond.

COST is supported by the EU framework Programme Horizon 2020
