

## ENVIRONMENTAL IMPACT ASSESSMENT (EIA)

### Definition

An Environmental Impact Assessment is a procedure evaluating the effects on the environment of an infrastructure project. The aim is to ensure that plans, programmes and projects likely to have significant effects on the environment are made subject to an environmental assessment, prior to their approval or authorisation. Consultation with the public is a key feature of environmental assessment procedures.

Within the European Union, the Directive 2011/92/EU Environmental assessment regulates the EIA for individual projects, such as a dam, motorway, airport or factory, and the Directive 2001/42/EC (known as 'Strategic Environmental Assessment' – SEA Directive) regulates the assessment for public plans or programmes.

Landscape impacts are the impacts or effects on the 'landscape in its own right' (LI and IEMA 2013). Renewable energy landscape impacts use the methodologies of EIAs in the planning and assessment of proposed renewable energy production systems.
