

## LANDSCAPE GOVERNANCE

### Definition

The processes of goal-oriented formulation, coordination, management and decision-making about utilisation and protection of landscape involving governmental and non-governmental actors (general public, NGOs, private sector etc.).

The trend is of reducing responsibility of the state government for public spaces or common land, progressive decentralization of decision-making regarding landscape issues, transparency and citizen participation. This is consistent with Art. 6 para. D of the European Landscape Convention, “*Each Party undertakes to define landscape quality objectives for the landscapes identified and assessed, after public consultation in accordance with Article 5.c.*”

The European Landscape Convention provides a framework for landscape governance, implementing subsidiarity, defining principles and concepts, promoting citizen participation and co-operation at different administrative levels, without imposing specific rules and methodologies.
