

STRATEGIC ENVIRONMENTAL ASSESSMENT (SEA)

Definition

According to OECD Strategic environmental assessment (SEA) is defined as analytical and participatory approach to strategic decision-making that aims at integrating environmental considerations into policies, plans and programmes and evaluates the inter linkages with economic and social considerations. It involves stating objectives of the policies, plans and programmes (PPP), describing the baseline environment, predicting the likely environmental impacts of the PPP (and of alternatives), and proposing ways of mitigating these impacts. It is generally carried out by (or for) the PPP proponent, with consultation of other relevant agencies. According to the EU directive on SEA, a SEA is **mandatory** for plans and programs which are prepared for agriculture, forestry, fisheries, energy, industry, transport, waste/ water management, telecommunications, tourism, town & country planning or land use and which set the framework for future development consent of projects listed in the EIA Directive, or have been determined to require an assessment under the [Habitats Directive](#).

Video introduction to EU SEA is available here:
